Working group vision and contribution to catalaix

With heterogeneous catalysis and material design as core expertise, we tackle global challenges via the development of sustainable chemo- and electro-catalytic transformations and processes. At the interface of chemistry, chemical engineering and material sciences, we focus on valorizing biomass, CO₂ and plastics in novel value cycles together with the necessary production and usage of hydrogen provided from renewable sources. interdisciplinary work is an indispensable part of our research. In catalaix, we will contribute all our catalysis knowhow in the joined design of disruptive and feasible technologies for value-added recycling and design of plastics towards an impact on future industry.
